CATALOGUE ESSAY

The The colours used on the C38 single-seater are showcased on the bezel and case back in white Quartz TPT®. This is achieved by interlaying 600 layers of silicon each 45 microns thick and impregnating them with a white matrix before heating them to 120 °C in an autoclave. This process gives the material a very high resistance/weight ratio, non-allergenic properties, and excellent resistance to UV rays. Developed by North Thin Ply Technology (NTPPTM), the technique is also used on the Carbon TPT® middle, but this time using carbon fibres. Red echoes can also be seen within the movement, particularly on the Carbon TPT® flange, the chronograph counters, and the power-reserve, torque and function indicators. The grade-5 titanium dial also includes the number 7, which is worn by Kimi in competition. The combination of these technical solutions gives this complex piece exceptional resistance, tested inhouse with impacts of 5,000 g's.

This limited edition of just 30 pieces, set to accompany the driver on all his major grands prix, is unveiled on 18 September at an evening event attended by Kimi and the Alfa Romeo Racing Team.
