BRACELET / STRAP

Bracelet Material - Alligator Leather
Bracelet Color - Black
Clasp - Pin Buckle
Clasp Material - Titanium

COMPLICATIONS

- Hours & Minutes
-
-

OTHERS

- Tourbillon

CATALOGUE ESSAY

The U22 takes weight reduction even further with a carbon-fiber and titanium case that weighs in at just 54 grams. With a slightly more racing-inspired look than U21, the U22 features a set of red accents that move along the flange. The U21 also features an application of Super-LumiNova on the hands. A closer look at the U22 reveals many of the well- thought-out details that go into creating a contemporary, cutting-edge skeleton watch. For instance, the variable inertia balance wheel of the tourbillon is especially designed and crafted to minimize air friction, the patterned carbon fibre used for the main plate offers maximum rigidity and the ruby bearings are set into solid gold chatons.
